

Kids Tramp multiple arrangement

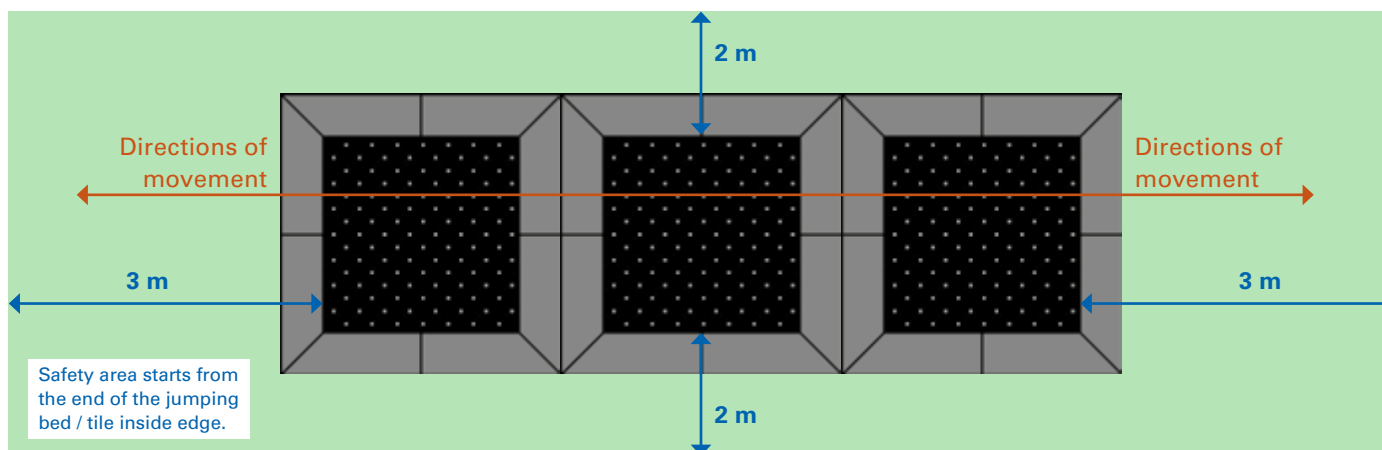

Possible arrangements

Surrounding safety areas according to TÜV EN 1176-1:2017-12:

If there's a defined direction of movement, you must consider a safety area of at least 3 metres length at the sides of jump-in and jump-out!

Surrounding safety areas for small and large Kids Tramps (incl. Loop), when arranged in-line:

The Kids Tramps are ideally suited for multiple arrangement. When the Kids Tramps are built in close together there is a gap between the boxes caused by the screws (1).

To avoid this gap all screws must be removed at the

current side at first. The Kids Tramp boxes then have to be reconnected with four long screws from the inside (2). These are included inside the scope of delivery.
